

LOOK TO US FOR YOUR SEATING NEEDS

➔ What is it?

Ultimate Floor Track Seating is an extremely comfortable automatic tip up seating system that quickly locks into a patented low profile track. This system increases capacity, comfort and safety for indoor and outdoor concert venues.

5 Rows of Folding Chairs [enlarge](#) [+]

➔ Additional Benefits

- Can be used both indoors and outdoors.
- In outdoor venues the automatic tip up seat prevents water from pooling on the seat pan- no more last minute army of workers needed to wipe off folding chairs after a rain shower!
- For indoor venues, padded covers are available to increase the already comfortable seats. Covers can also be used to create different ticket pricing for VIP areas, etc.
- Available for SALE, RENTAL and long term LEASE. Floor Track Seating comes with a space efficient racking system that minimizes on site storage requirements.

➔ Features & Benefits

- Unlike conventional folding chairs where the row spacing is inconsistent because spectators move the seats encroaching on aisles – the 30" row depth is maintained as the chairs are locked in position using the low profile Floor Track. This system exceeds the fire safety requirements and guarantees aisles where entry and exit areas retain their required width and keep seat rows uniform and straight.
- The single leg frame of the seat allows the system to be set up in 30" of row depth. This still leaves enough space for guests to pass one another in a row. Conventional folding chairs require a minimum of 36" of row depth and even then it is a very tight space for any guests trying to get to their seat.
