

THE BRAVO | THE GRID SYSTEM

**SEATING  
SOLUTIONS**  
*INNOVATING THE SPECTATOR EXPERIENCE*

grid system in use – at the LG arena

**grid flat-floor seating system allows any choice of seat tipping model to be arranged in row formation on a flat floor - the grid system is lightweight and robust and easy to layout and has the following advantages.**

- **increased seating capacity** – the flat floor system uses a lightweight aluminum floor bar onto which banks of two or three seats are slotted. An automatic ‘tipping’ seat has a narrower envelope than a stacking or folding chair giving the option of either increased seating density or wider clearways.
- **increased set up speed** - the system can be assembled by one man faster than conventional folding or stacking chairs.
- **safety** - once in place - grid is almost impossible to move so chair row ‘snaking’ is eliminated.
- **cleaning** – less legs means its easy to clean between events.
- **handling** - removal and storage is fast and easy - seat modules can be loaded
- **transported and stored in lightweight aluminum stillages.**

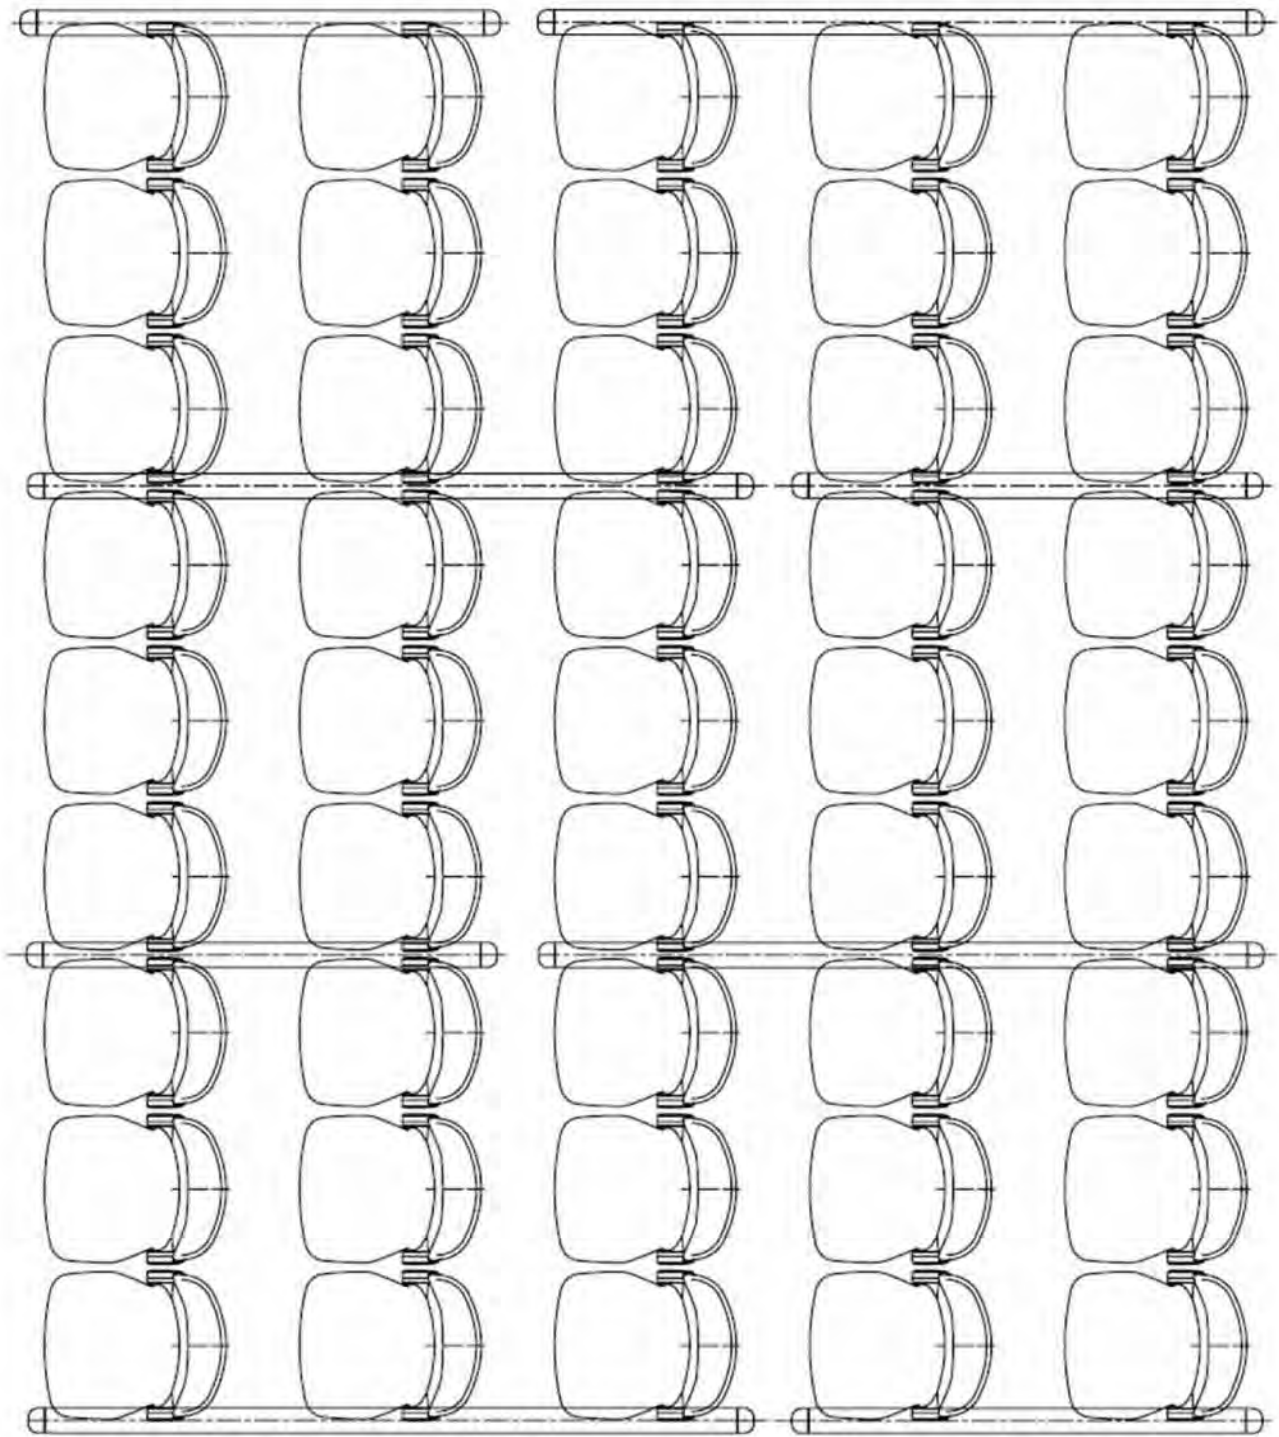

## Handling and storage

**Typical layout principle using 2 and 3 row interconnecting floor bars.**
